

ABCS 7.0 Overview

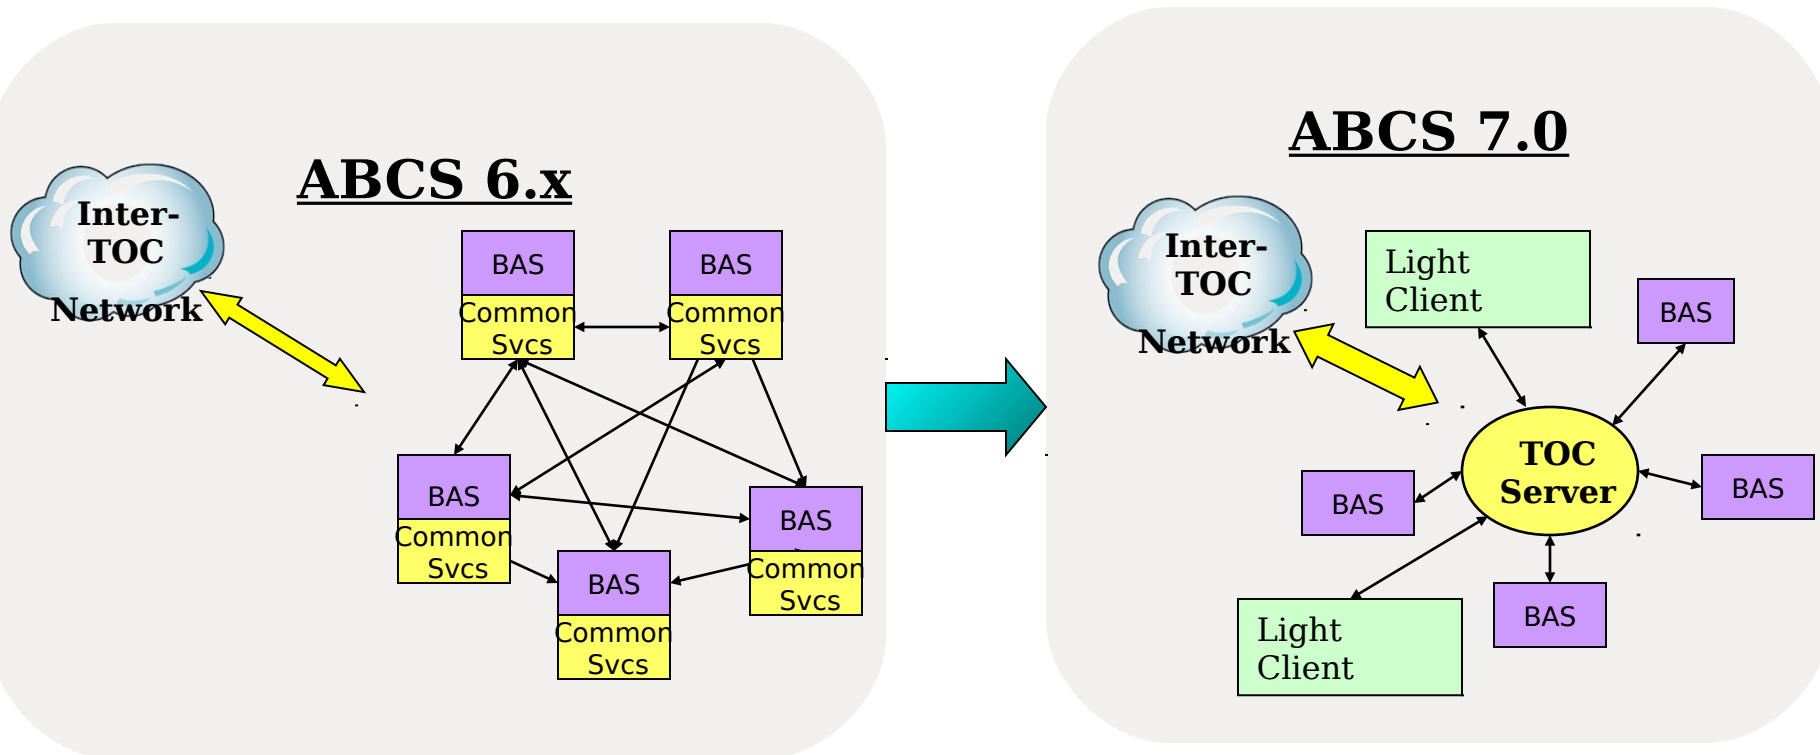

Linda Johnston

PM GC C2 Technical Management
Division

732 427-6499

ABCS Architecture Migration

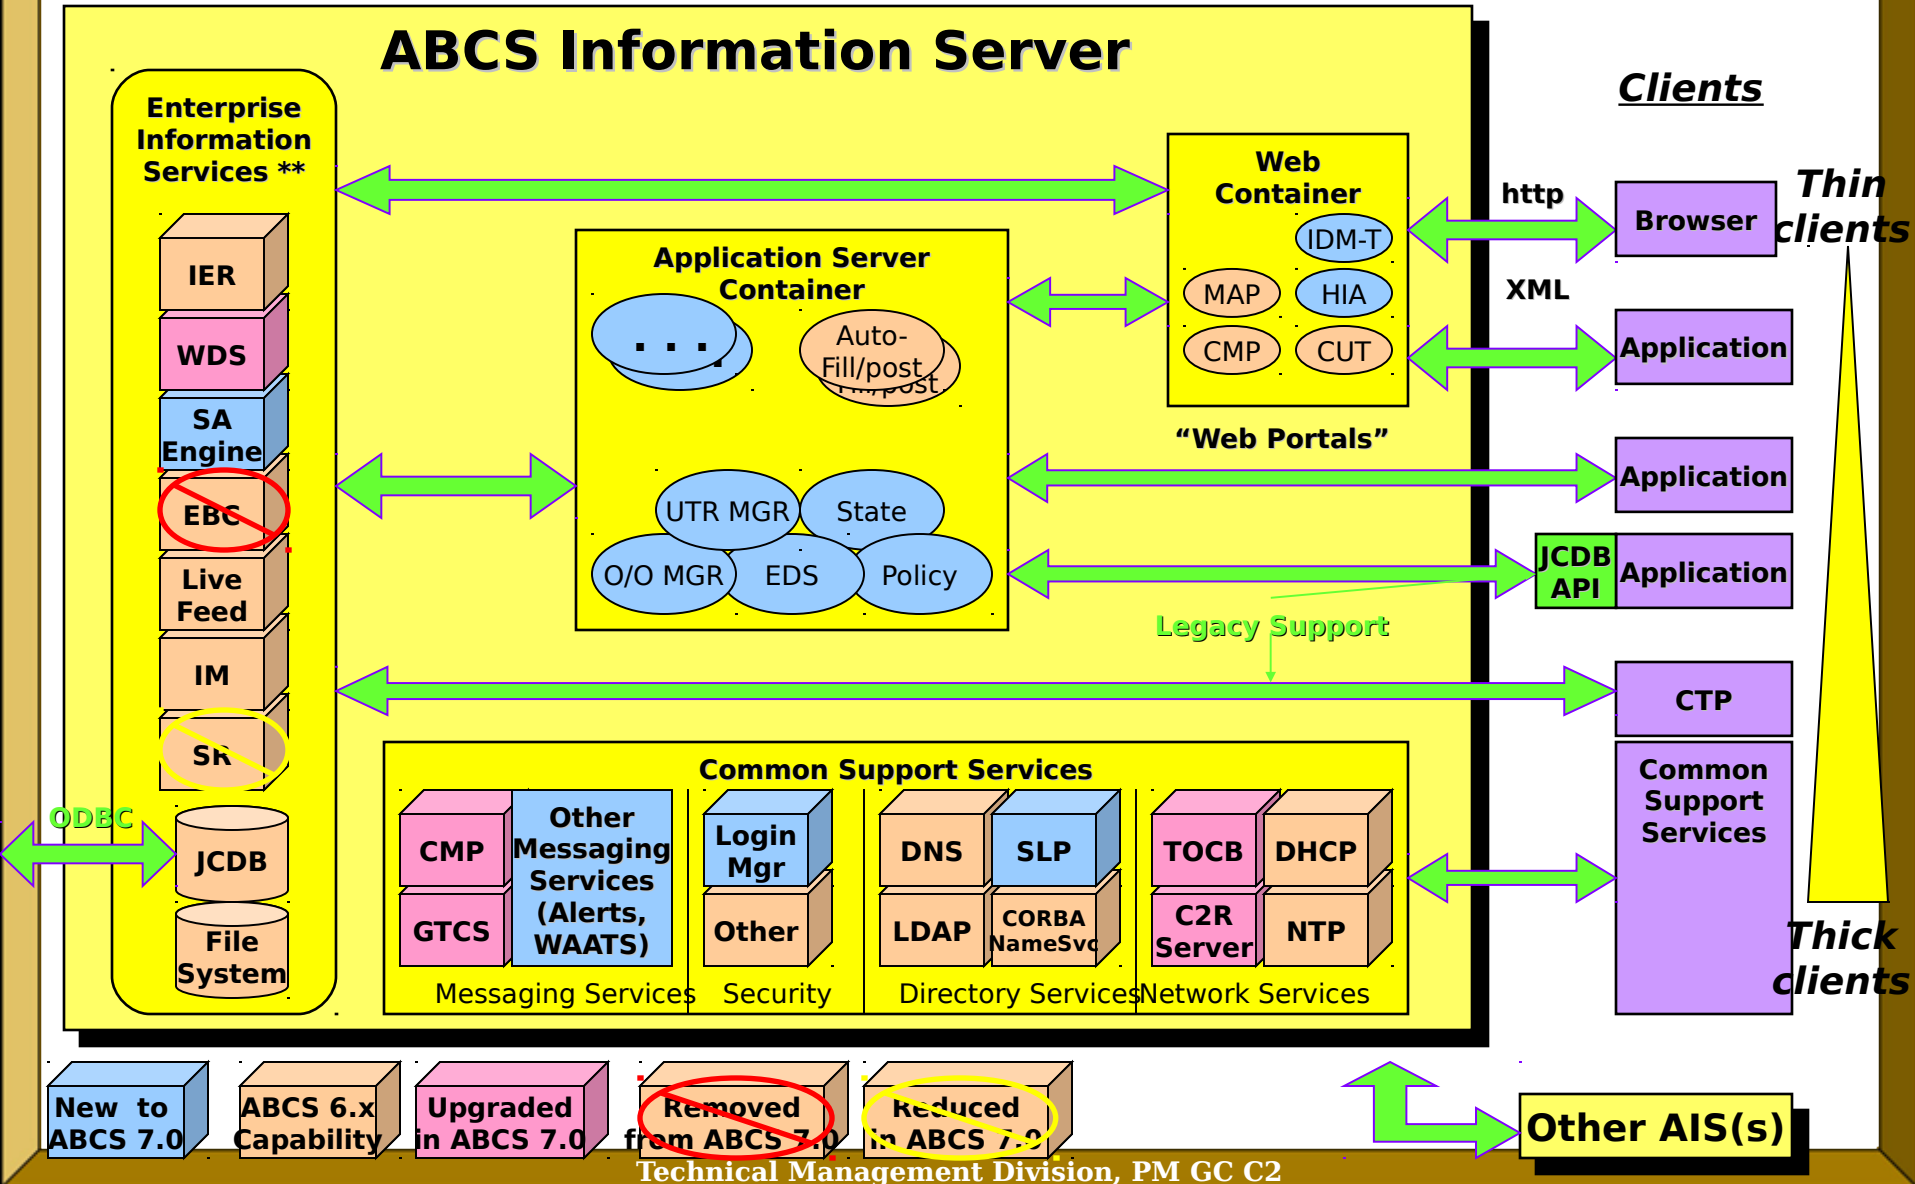

GOAL:

Improved Performance, Robust, Affordable,
Supportable, Easy to Operate

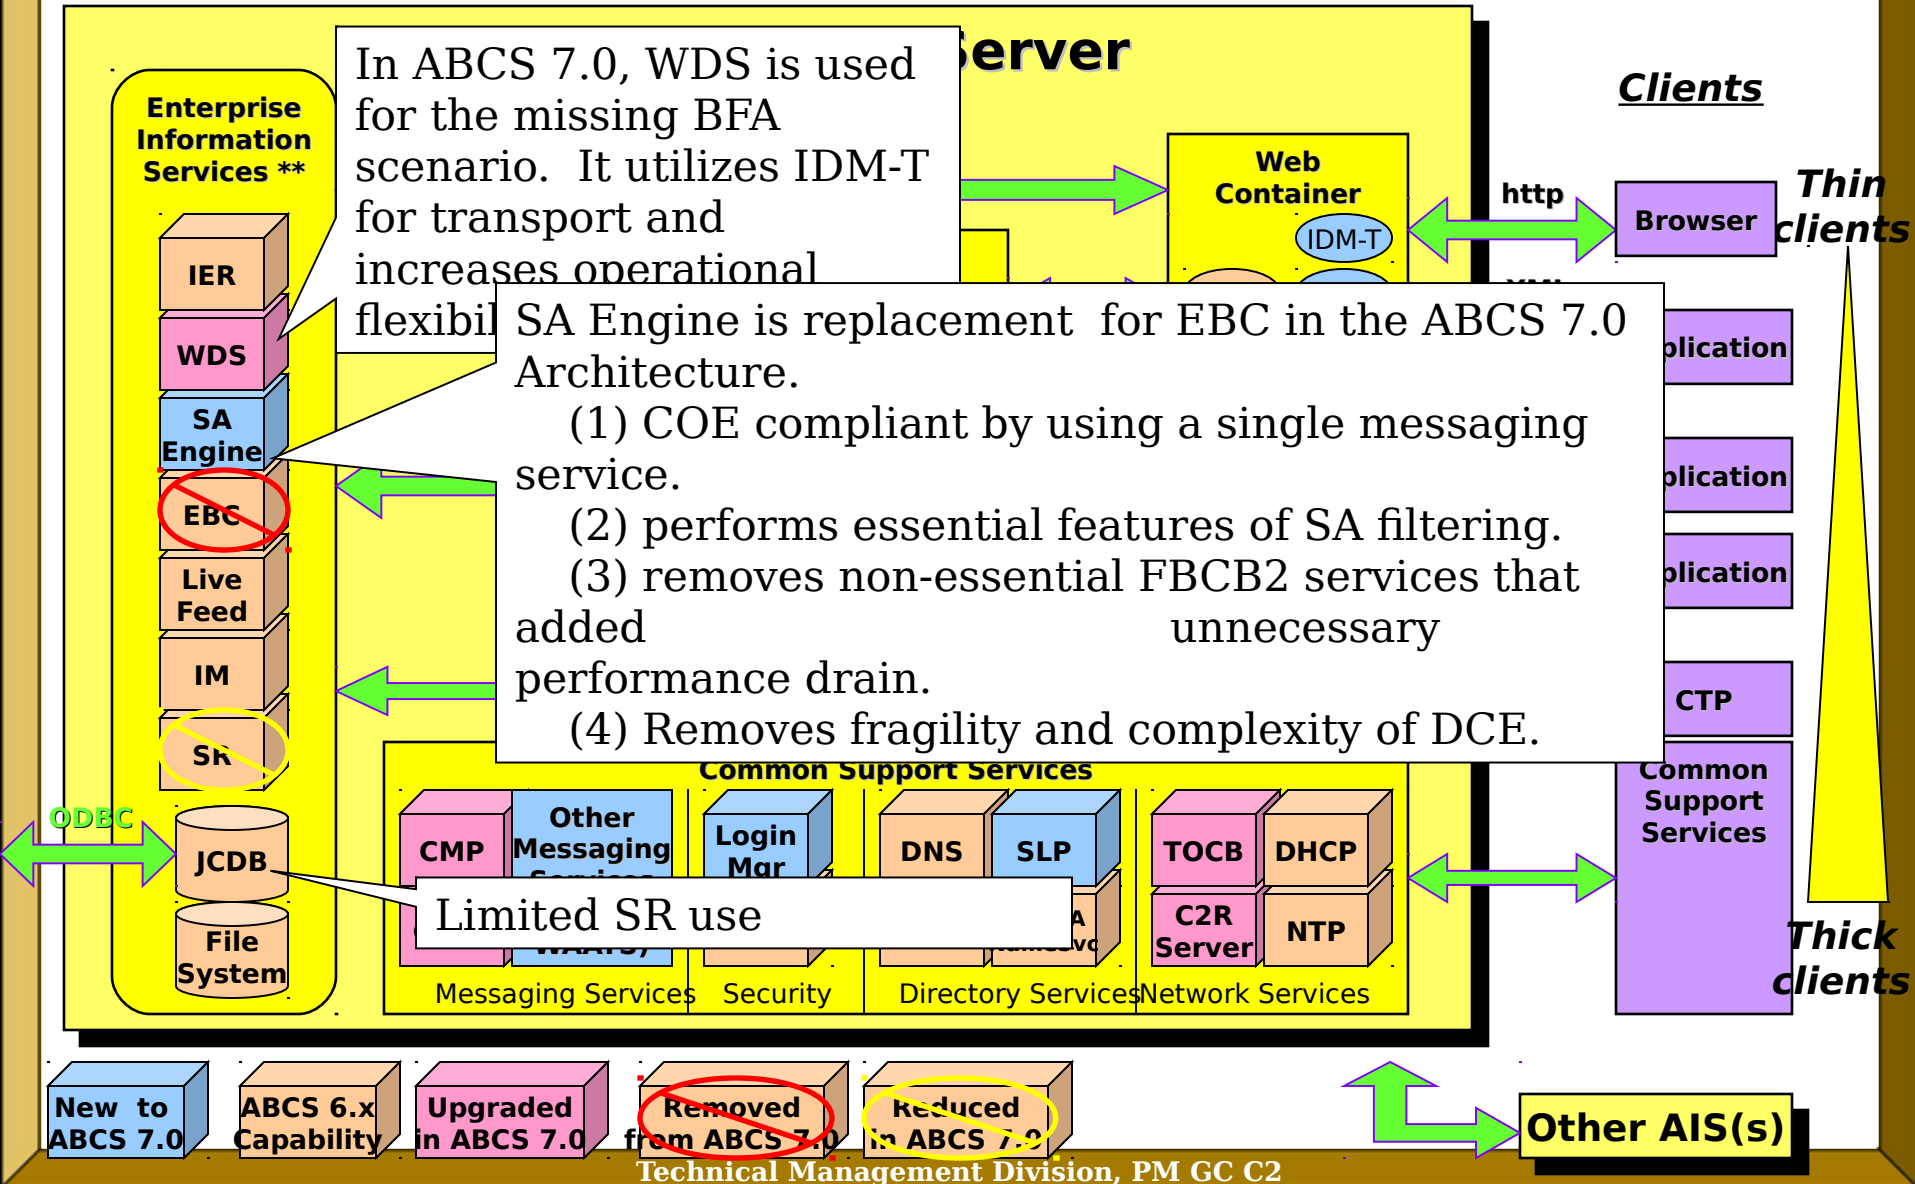

ABCS 7.0 Design

- Changes
 - Move to a dedicated TOC server
 - Support migration to web based commercial model
 - Simplify situational awareness data distribution
- Challenges
 - Retain support for BAS application interfaces
 - Fix problems/improve performance

ABCS 7.0 Architecture

ABCS 7.0 Architecture

ABCS 7.0 Architecture

ABCS Information Server

ABCS 7.0 includes JMS (Java Messaging Services). Enables the publish/subscribe paradigm for the new TOC Services.

In ABCS 7.0, will handle C2 and SA data and provide message level backward compatibility by supporting multiple message baselines and header formats.

Web Container

http

Clients

Thin

SLP (Service Location Protocol) is a standard service of both Solaris and Windows that ABCS 7.0 is using for finding services such as TOC Servers, AMDWS/Air Tracks, IMETS, etc. Enables improved failover process.

TOCB and C2R Server are enhanced in ABCS 7.0 and independent boot of TOC clients and servers

Preliminary Server Product Allocation

AIS Server

Component / Platform Allocation

(As of May 2002 CDR)

•AIS Server

•SUN ULTRA III

•Solaris 8	•JacORB	•IDM-T/WAATS	•Netscape SuiteSpot Server
•COE Kernel	•SA Engine	•Alerts Client	•OWNPOS
•COE BIND (ISC)	•CMP	•Netscape Web Browser	•MySQL
•Perl, TCL/TK	•COMMS Server (GTCS)	•DII COE Print Server	•SOAP Adapter
•Java2	•JCDB, EDS, WDS	•DUT	•SR
•TOC Boot Control	•Informix Dyn Server, IER	•Fvwm2	•Common UTO Tool
•C2R	•CTP (IM, LFS)	•MACI Process Mgt	
•Enterprise Web Server (iPlanet)	•Security Tools (SOS, SPCFG, SSAF, SSAFAP, SARA, Unishred Pro, Crack, Hosts KPC, RealSecure)	•Sun One App Server	
•LDAP Directory Server (iPlanet)		•SAMBA	
•MACI Scripts APM		•Acrobat Reader	
		•SA Adapter	
		•State Manager	
		•FBCB2 Services	

•TAO (AcceORB)

•PCI Card (INTEL / AMD Processor)

•Windows 2000 Server	•JCDB EDS API	•Security Tools (SPI, SSAF, SSAFAP, Norton Antivirus, Nessus, BlackICE)	•Winzip
•COE Kernel	•Acrobat Reader		•ABCS Map Server, Arc IMS, Arc SDE, ESRI SDE
•TOC Boot Control	•Netscape Web Browser		•IMETS
•Perl, TCLTK	•TAO		•Informix
•Java2	•JacORB		•Enterprise Web Server (iPlanet)

Preliminary Client Product Allocation

AIS Client

Component / Platform Allocation

(As of May 2002 CDR)

•Solaris Client

•*BFA/BAS* •*Application Suite*

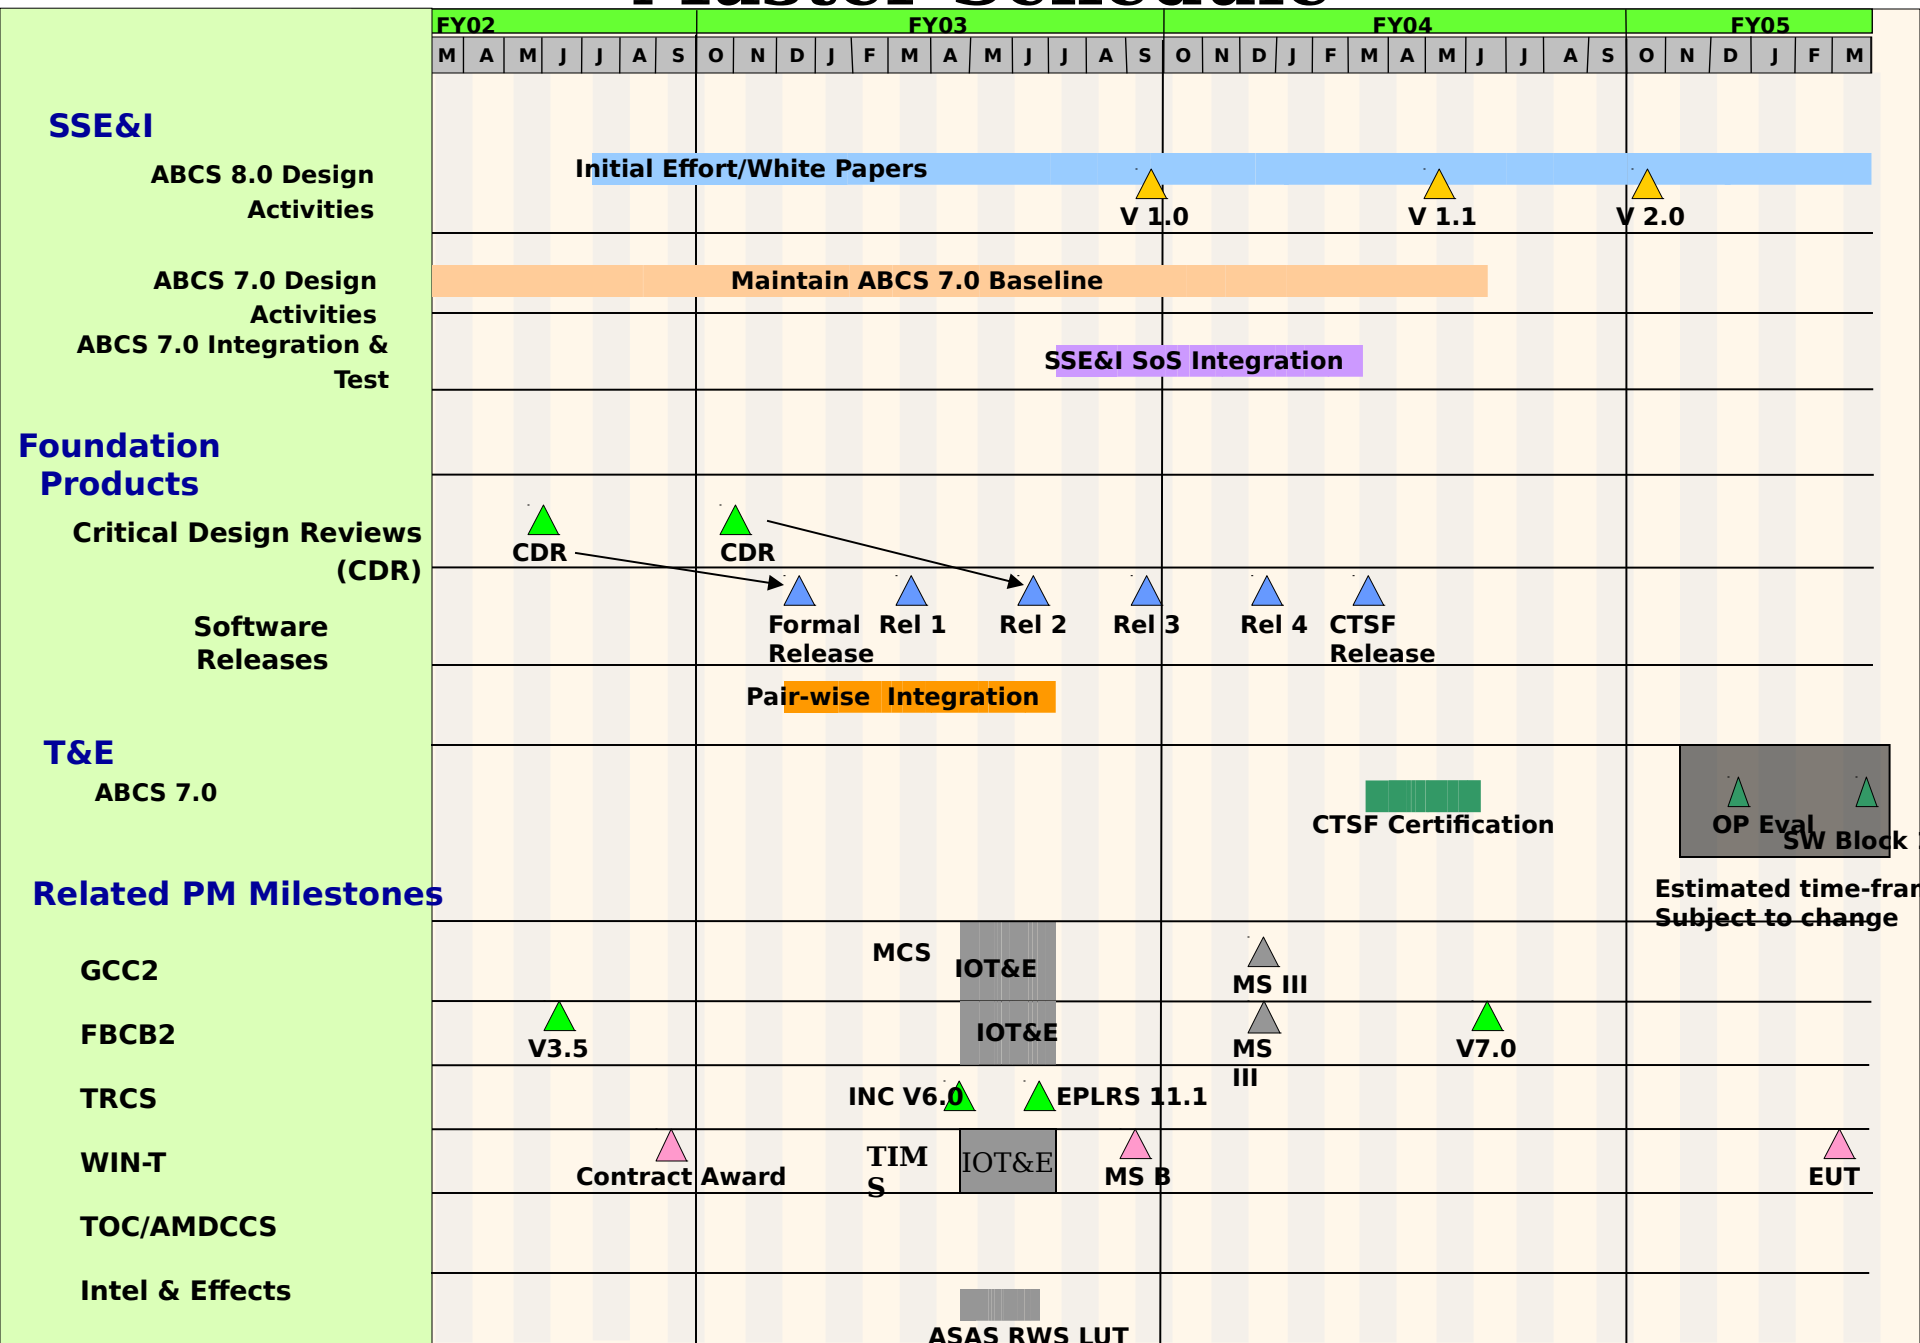

- | | |
|--|-------------------------|
| •Solaris 8 | •MACI Scripts for APM |
| •COE Kernel | •DUT |
| •Perl, TCL/TK | •fvwm2 |
| •Java2 | •GTAR |
| •TOC Boot Control | •Alerts Client |
| •C2R | •JCDB EDS API |
| •Netscape Web Browser | •TAO |
| •DMS Client (NEXOR) | •JacORB |
| •CMP | •MACI Process Mgt |
| •COMMS Server (GTCS) | •Acrobat Reader |
| •JMTK (JMV)/IFL | •A2C2 Airspace Client |
| •Informix Client | •DII COE Print Services |
| •CTP (Client Apps) | •DTSS Overlay Client |
| •ABCS Map Server Client | •IMETS Client |
| •Security Tools (SOS, Sara, SPCFG, SSAF, SSAFAP, Unishred Pro, Hosts KPC, RealSecure, Crack) | •CTP Clients (LFC, CTP) |
| | •SunForum |
| | •TransArc DCE |
| | •Common UTO (Client) |
| | •Star Office |

•Windows Client

•*BFA/BAS* •*Applications*

- | | |
|--|-----------------------|
| •Windows 2000 Pro | •WinZip |
| •COE Kernel | •Alerts Client |
| •Perl, TCL/TK | •TAO |
| •Java2 | •JacORB |
| •C2R | •JCDB EDS API |
| •DMS Client(Outlook) | •Acrobat Reader |
| •CMP | •MS Office |
| •JMTK (JMV)/IFL | •DTSS Overlay Client |
| •TOC Boot Control | •Comms Server (GTCS) |
| •Netscape Web Browser | •Microsoft NetMeeting |
| •Map Server Client | |
| •Security Tools (NoTrace, SPI, SSAF, SSAFAP, Norton AntiVirus, Nessus, BlackICE) | |
| •Common UTO Tool(Client) | |

Master Schedule

20 March 2002

Summary

GOAL: Improved Performance, Robust, Affordable, Supportable, Easy to Operate

- *Performance* is improved by simplifying the data dissemination process, reducing computationally intensive processes like SR and EBC and providing upgraded communications and hardware platforms.
- *Robustness* is improved by leveraging the client/server architecture, decoupling processes with web service publish/subscribe capability and adding improved data management capabilities such as EDS, TDDM, State Management and Policy.
- *Affordability* is addressed through the use of laptops and less expensive COTS hardware and software.
- *Supportability and Ease of Operation* are improved with integrated data initialization capabilities, backward compatibility to ABCS 6.x and SLP based Failover processes.
